It is a great book to have as pharmacist or hospital in practice or even pharmacist She has supported the accreditation of the improved improved Independent Prescribing course at UCL. Selecting and prescribing drugs is increasingly complex and demanding, and it is undertaken as part of a multi-disciplinary process that involves pharmacists, some of whom are now prescribers in their own right, along with doctors, nurses and other members of the healthcare team. Together with the ongoing publication of national and international guidelines and frameworks, the face of therapeutics is ever changing. Since the late 1980s the practice of clinical pharmacy has grown from a collection of patient-related functions to a process in which all actions are undertaken with the intention of achieving explicit outcomes for the patient. As a consequence, we have encouraged our authors to present details of all key drugs used, along with details of the prescribed regimens, even if not licensed for that specific indication. There is, however, a downside to this approach. As the role of other healthcare professionals, pharmacists, nurses, optometrists, physiotherapists, podiatrists and therapeutic radiographers have expanded, prescribing rights have in turn been extended to them. The NMS has been introduced to allow pharmacists to support patients with long-term conditions who have been recently started on a medicine to target medicines adherence To prescribe is to authorise, by means of a written prescription, the supply of a medicine. This book was written to help the reader understand and address many of these issues. Table 1.3 summarises the three key elements of the care process (Cipolle et al., 1998). Initially the fundamentals of rational and effective prescribing will be discussed followed by a brief outline of the acquisition of prescribing rights by pharmacists and the associated legal framework. It will also be of great use to anyone doing a course in pharmacotherapy. You're Reading a Free Preview Pages 404 to 421 are not shown in this preview.
